#### PROBLEM

# EASILY RELEASE THE PANELS OF FORMWORKS FOR CONCRETE

#### SOLUTION

An efficient release agent is required to prevent adhesion between the concrete and the timber or steel shuttering.

**DISARMFER** is a synthetic based for-mula which is free from mineral oils and ready to use. It isolates the shut-tering from the casting by means of a traditional type physical release action and also reacts chemically with the cement paste of the concrete, crea-ting a further insulating element in the form of a very fine cohesion free film which allows an easy separation of the two elements.

#### ADVANTAGES

- Allows to have a uniform appearance without staining and all angles and corners will be sharp and clear cut.
- It is non toxic and does not contain mineral oils.
- Easy and fast formwork maintenance.
- Allows finishing work and painting on surfaces treated with release agent with simple manual brushing.
- Allows the same panels to be used many times.

### **APPLICATION FIELDS**

**DISARMFER** is suitable for use with every type of concrete, metal, timber shuttering or plastic materials (epoxy and phenolic resins, polyester, polyu-rethane).

It is recommended in all ca-ses where difficulty occurs with cold or warm shuttering, warm concrete, complex shape or white cements. It is also suitable for concrete castings matured by steam or normal process.

**DISARMFER** is particularly suitable for prefabricated concrete and also when white cement is used.

## **METHOD OF USE**

#### APPLICATION

**DISARMFER** is applied on the shuttering in a very thin layer using spraying apparatus or a lightly saturated pad. **DISARMFER** release agent protects the finished concrete surface from oil or grease.

**DISARMFER** produces surfaces which are free from oils and grease.

#### • COVERAGE

With 1 litre of **DISARMFER** you can treat on average:

- metal shuttering: 40-50 m<sup>2</sup>
- timber shuttering: 25-35 m²
- plastic shuttering: 40-50 m²
- plaster or cement shuttering: 5-10 m², for subsequent applications 15-20 m².

#### • PRECAUTIONS

- Avoid applying the product in quan-tities greater than indicated so as not to reduce the release qualities of DISARMFER or affect the final ap-pearance of the concrete surface.
- Dry any excesses of DISARMFER deposited in corners and on the si-des of the shuttering.
- Protect the product from the sun.

TECHNICAL CHARACTERISTICS							
	Standard	DISARMFER					
Appearance		oily liquid					
Colour		Dark brown					
Density	EN 2811-1	$0.90 \pm 0.02  \text{kg/L}$					
Storage in original packaging in a dry place, away from frost		24 months					

## **PACKAGING**

200-litres drums. 20-litres pails. 5-litres pails.
