

EXTRACLEAN

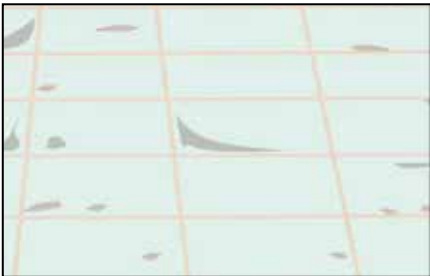

BUFFERED ACID BASED DETERGENT FOR CLEANING CERAMIC TILES, NATURAL STONES AND CONCRETE

CHARACTERISTICS	ENVIRONMENTAL	METHOD OF USE	PRECAUTIONS
		 APPLY BY BRUSH	

PROBLEM

REMOVE CEMENT CRUSTING WITHOUT DAMAGING FLOORS WITH TILES

If they are not removed straight after grouting, residues of cement products used for laying ceramics require thorough cleaning with a product which does not damage the surface of the tiles.

SOLUTION

EXTRACLEAN is a specific product containing a special organic acid which does not produce toxic fumes harmful for one's health, but has an excellent descaling action equal to that of stronger acids.

EXTRACLEAN is supplied as a concentrated liquid.

APPLICATION FIELDS

EXTRACLEAN is a specific product for removing traces of cement, lime, efflorescence and oily surface stains.

It can be used for cleaning ceramic tile floors or wall tiling.

EXTRACLEAN is particularly indicated for cleaning terracotta tiles before treating them with a protective product; furthermore it can be used to remove efflorescence in grouting spaces and to clean rust stains.

ADVANTAGES

- Does not produce dangerous fumes.
- Does not damage the surface of the tiles.
- Makes cleaning fast and easy.

METHOD OF USE

It is necessary to wet the surfaces to be treated with water, in particular very absorbent surfaces such as Tuscan terracotta, concrete, plaster and porous ceramics.

Before using **EXTRACLEAN**, protect materials which could be damaged by splashes.

Dilute 1 litre of **EXTRACLEAN** with 2-3 litres of water.

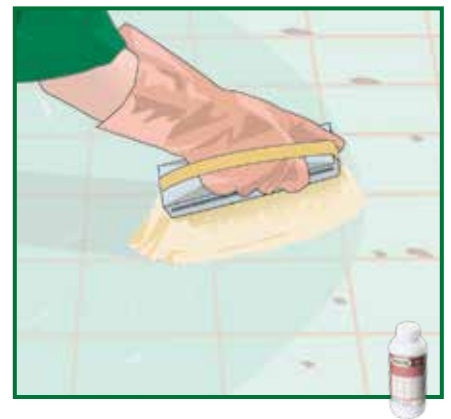

Apply **EXTRACLEAN** liquid using a broom or a brush, leave the product to work for roughly 5 minutes then remove any residual scale using the broom or spatulas and abrasive sponges if necessary. Dry the floor and rinse thoroughly with abundant water. For difficult cases use a more concentrated solution after trying a sample on a corner of the floor.

• COVERAGE

The yield varies between 100 and 200 g/m², depending on the porosity of the support.

• PRECAUTIONS

- Avoid using **EXTRACLEAN** on marble, calcareous stone and glazed tiles or facings which are not resistant to acids.
- Wait at least one week after grouting before cleaning the grouting spaces.

TECHNICAL CHARACTERISTICS

	Standard	EXTRACLEAN
Appearance		Liquid
Colour		Trasparente
Density		1.10 ± 0.01 kg/L
pH		1.1
Active content		15%
Storage in original packaging in a dry place, away from frost		12 months
Workability characteristics		
Application temperature		+0°C ÷ +40°C
Application		Manual

Test conditions: temperature 23±2°C, 50±5% R.H. and air velocity in test area <0.2 m/s. **These parameters may vary based on the specific conditions of the worksite: temperature, ventilation, porosity of the substrate and of the material laid.**

(*) The times indicated will be longer or shorter as the temperature drops or rises.

the numerous possible uses and the possible interference of conditions or elements beyond our control, we assume no responsibility regarding the results which are obtained. The purchasers, of their own accord and under their own responsibility, must establish the suitability of the product for the envisaged use.

The figures shown are average indicative figures relevant to current production and may be changed or updated by INDEX at any time without previous warning. The advice and technical information provided, is what results from our best knowledge regarding the properties and the use of the product. Considering

PACKAGING

5-kg-Can
1-kg-Bottle in 12-bottles box
