PROBLEM

INCREASING THE GRIP OF PLASTERS TO THE SUBSTRATE

SOLUTION

BioFONDICAL is a premixed render in powder form, based on hydraulic lime and selected aggregates.

APPLICATION FIELDS

BioFONDICAL is designed to improve the grip of any type of plaster on conventional building substrates: brick, stone, tuff, cellular concrete and mixed masonry.

ADVANTAGES

- Easy to apply.
- Excellent breathability.
- Excellent resistance to frost/thaw cycles.
- Natural composition ideally suited for renovating/conserving historic buildings.

METHOD OF USE

• PREPARING THE SUBSTRATE

The substrate must be free from dust, dirt, flaking parts, release agents etc..

• PREPARING THE MIX

The mix should be made to a semi-plastic consistency (4.5-5 litres of clean water per 25 kg bag).

• APPLICATION

Apply with a trowel, having first dampened the surface. Plaster after approximately 24 hours, or in any case the next day.

• COVERAGE

7 kg/m² × 0.5 cm.

• WARNINGS

- Use cold water in the summer and water at 20°C in the winter.
- Application temperature from +5°C to +35°C.
- Do not add other materials such as bonding agents, aggregates or additives.
- In hot weather, keep the surface of the laid mortar wet, preventing the product from drying out quickly, for at least 8 hours.
- Wet the surfaces in high temperatures.
- Do not add water when the mix starts to set.
- Avoid sudden temperature changes while the plaster is setting.
- Store in original closed packaging in a dry place. Protect against frost and high temperatures.
